GOOGLE PLAYSTORE APP MARKET ANALYSIS

INTRODUCTION

This analysis explores app performance on the Google Play Store, focusing on category distribution, ratings, installs, pricing, and user sentiment to support data-driven decisions.

DATA PRESENTATION

These variables were cleaned, analyzed, and visualized using Microsoft Excel to highlight trends and patterns.

CATEGORY ANALYSIS

Family and Game categories have the highest number of apps. This indicates high competition in these segments.

METRICS ANALYSIS

- Ratings: Average rating falls at 3.54, with Education, Art and Design, and Entertainment apps performing best.
- Installs: Game dominate, followed by Communication, and Tools. Entertainment and utility apps generate highest user engagement.
- Pricing: Most of the apps are free.
- Size: Larger sizes are common in Games.

SENTIMENT ANALYSIS

About 60% of apps have positive ratings. This indicates overall user satisfaction.

Interactive Dashboard

Filters allow dynamic analysis and comparison across segments.

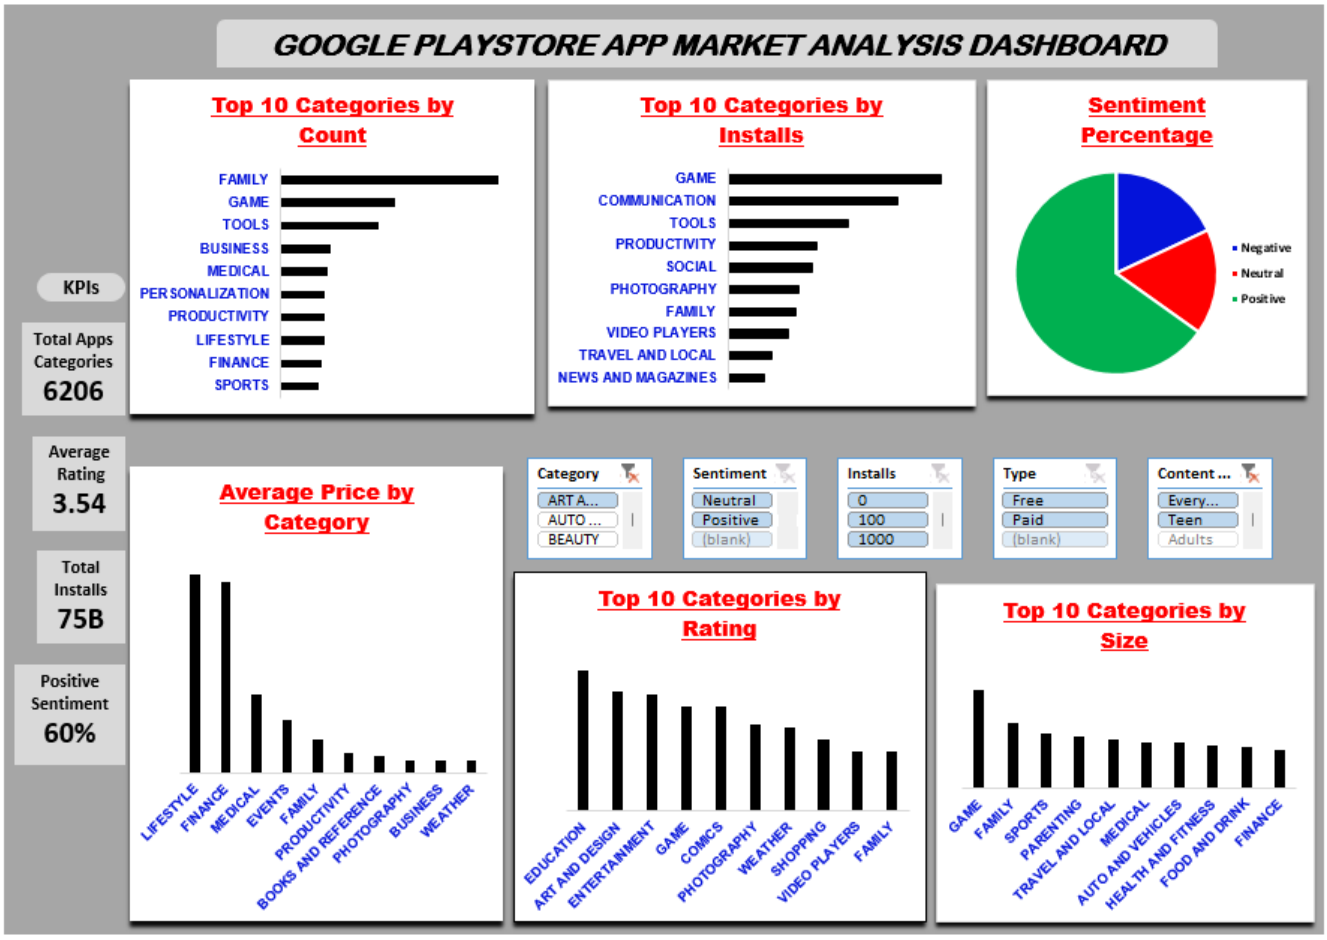
RECOMMENDATIONS

- Focus on high-demand categories.
- Use freemium model to attract users.
- Improve app quality to maintain high ratings.
- Optimize app size for accessibility.
- Explore less saturated niches.

CONCLUSION

This analysis highlights key trends in the Google Play Store ecosystem:

- App distribution is heavily concentrated in a few categories.
- Games dominate in terms of popularity and installs.
- User sentiment is largely positive.

- Free apps drive the majority of user engagement.


The interactive dashboard provides a powerful tool for exploring these insights and supports data-driven decision-making.
